(57) Abstract:

PROBLEM TO BE SOLVED: To facilitate the installation of a monitoring camera or monitoring device and to provide information from the monitoring camera even when the monitoring device is moved to a distant place by transmitting/receiving a control signal or image signal between the monitoring camera and the monitoring device while using a digital radio line.

SOLUTION: This image transmission equipment transmits an image photographed by a monitoring camera 1 while using a radio terminal 3 with a signal from a sensor 2 such as an invasion sensor for detecting an invader or the like as a trigger. Then, the image transmitted from the radio terminal 3 is transmitted through a radio base station 4, public line 5 and radio base station 6 to a radio terminal 7 connected to a monitoring device 8, and the image is displayed on the monitoring device 8 and preserved by an image storage device 9.
